PROFESSIONAL SUMMARY

Results-driven Data Analyst and Data Science enthusiast skilled in Python, SQL, Tableau, and Power BI, with experience building end-to-end analytics pipelines and transforming data into actionable insights. Also experienced in AI and agentic systems, developing intelligent workflows and scalable ML solutions to drive data-informed decision-making and impact.

EDUCATION

Newton School of Technology, Rishihood University <i>Bachelor of Technology – Data Science</i>	2024 – 2028 GPA: 7.6 / 10.0
Parents Pride International School <i>Intermediate (Class XII)</i>	2023 – 2024 Grade: 80.0%
Jawahar Navodaya Vidhyalaya Junapani Khargone <i>Matriculation (Class X)</i>	2021 – 2022 Grade: 92.0%

SKILLS

Languages: Python, SQL
Frameworks & Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Plotly, Streamlit
Tools & Visualization: Tableau, Power BI, Google Sheets, Excel, AWS, Docker, Kubernetes, GitHub Actions
AI / ML: Random Forest, KNN, PCA, SVM, NLP, GenAI, LangGraph, LangSmith, MCP
Others: Probability, Statistics, Data Modeling, Data Cleaning, EDA, Dashboarding, Agile / Scrum

PROJECTS

Uber Rides Analytics Dashboard <i>Tableau, Data Visualization</i> GitHub	April 2026
- Engineered a KPI-driven Tableau dashboard by ingesting, cleaning, and transforming 50,000 trip records across 6 cities into structured analytical layers, enabling granular city-level performance benchmarking across trip status, fare distribution, distance traveled, and rider-driver supply-demand metrics. - Designed 8+ interactive visualizations exposing an 86.2% trip completion rate, \$15.98 avg fare, 350K+ km total distance, and a critical 4.3:1 rider-to-driver supply imbalance (38K+ riders vs. 8.9K drivers), surfacing actionable revenue optimization opportunities and cross-market operational inefficiencies.	
Swiggy Food Orders Analytics <i>Python, Pandas, Scipy, Matplotlib, Seaborn, Tableau, ETL</i> GitHub	April 2026
- Engineered an end-to-end ETL pipeline ingesting and cleaning a 1,97,430 raw rows, applying null-value treatment, duplicate removal, and feature engineering to produce 91,788 analysis-ready records across 898 restaurants spanning 28 cities and states - enabling multi-dimensional food delivery analytics at scale. - Designed 3 Tableau dashboards analysing 2.3 Cr in total revenue, surfacing key insights including top-performing cuisines, city-level order distribution, and delivery time patterns — validated with ANOVA and Spearman correlation (SciPy) to confirm statistically significant pricing and rating relationships.	
Job Market Analytics Dashboard <i>Google Sheets, Data Analysis, Pivot Dashboarding</i> GitHub	February 2026
- Built an end-to-end data analytics pipeline processing a 7,900+ row LinkedIn jobs dataset, applying systematic data cleaning, null-value treatment, and feature engineering to produce 5,000+ structured, analysis-ready records with derived categorical dimensions — sector classification and company size category. - Designed a multi-view interactive dashboard consolidating 4 executive KPI metrics — 90K+ total applications, ~18 avg applications per job, 35% remote role share, and top-hiring sector breakdown — with pivot-table-driven drill-down views identifying state-level hiring concentration patterns.	

CERTIFICATIONS & ACHIEVEMENTS

Career Essentials in Generative AI <i>Microsoft & LinkedIn</i> View Certificate
Completed industry-recognized certification covering generative model workflows, transformer architectures, and applied prompt engineering techniques for production AI use cases.
MumbaiHacks 2025 <i>Powered by HCLTech</i> View Certificate
Built an AI-driven soil advisory system under hackathon time constraints at MumbaiHacks 2025 (HCLTech), integrating LLM-based recommendations with structured agronomic data for real-time farmer guidance.
Vidyarthi Vigyan Manthan (VVM) <i>organised by NCERT and NCSM</i>
Achieved District Rank 2 among 1,000+ participants in the Vidyarthi Vigyan Manthan national science examination, demonstrating strong analytical and problem-solving aptitude.
