PROFESSIONAL SUMMARY

Analytical and results-oriented Data Analyst and Data Science enthusiast skilled in Python, SQL, and Tableau with experience building end-to-end analytics pipelines and converting raw data into actionable insights. Also experienced in AI and agentic systems, creating intelligent workflows and scalable ML solutions to support data-driven decision-making and business impact.

EDUCATION

Newton School of Technology, Rishihood University <i>Bachelor of Technology – Artificial Intelligence</i>	2024 – 2028 GPA: 6.8 / 10.0
Balaghat Public School <i>Intermediate (Class XII)</i>	2023 – 2024 Grade: 73.0%
Balaghat English Higher Secondary School <i>Matriculation (Class X)</i>	2021 – 2022 Grade: 85.0%

SKILLS

Languages: Python, SQL
Frameworks & Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Plotly, Streamlit
Tools & Visualization: Tableau, Google Sheets, Excel, Docker, GitHub Actions
AI / ML: Random Forest, NLP, Generative AI, LangGraph, MCP
Others: Probability, Statistics, Data Modeling, Data Cleaning, EDA

PROJECTS

Credit Default Risk & Portfolio Analysis <i>Google Sheets, Data Analysis, Pivot Dashboarding</i> GitHub	April 2026
- Analyzed a \$3.3B mortgage portfolio (10,000 records) to identify credit default risk patterns, engineering a 9-KPI framework revealing a 23.67% default rate and \$749.2M in exposure at risk. - Built an 11-visualization dashboard in Google Sheets uncovering LTV as the strongest default predictor (Very High LTV loans defaulting at 88.12%) across region, loan type, and demographics. - Delivered 5 data-backed underwriting recommendations — including a dual-trigger approval model ($LTV \leq 80\% + DTI \leq 36\%$) — projected to reduce Exposure at Default by up to \$150M.	
Swiggy Orders Analysis <i>Python, Tableau</i> GitHub	February 2026
- Built an end-to-end ETL pipeline in Python processing raw Swiggy order data through 5 automated stages — extraction, cleaning, EDA, statistical analysis, and final load prep — producing a structured, dashboard-ready dataset - Conducted in-depth EDA and statistical analysis generating 10 analytical visualizations and running hypothesis tests (ANOVA, Spearman correlation) to uncover pricing patterns, top restaurant trends, and city/category-level insights. - Engineered a modular project architecture with reusable Jupyter notebooks and a unified etl pipeline.py script, applying IQR-based outlier detection, null handling, price bucketing, and column standardization for Tableau-ready output.	

EXTRA-CURRICULAR ACTIVITIES

- Actively pursuing Robotics as a co-curricular activity; represented the institution at a robotics competition held at IIT Delhi.
- Participated in **Smart India Hackathon (SIH)**, collaborating with a team to develop innovative solutions for real-world problem statements.
- Exploring Open source and an active open source contributor on European Summer Of Code.
