

YASH DHANKHAR

Data Visualization & Analytics • Business Intelligence • Python & Streamlit

+91 98686 31184 | yash.dhankhar06@gmail.com | [LinkedIn](#) | [GitHub: OnlineBunker](#) | New Delhi, India

PROFESSIONAL SUMMARY

B.Tech CS & AI student (2024–2028) at Newton School of Technology, Rishihood University, specializing in data visualization, exploratory data analysis, and interactive dashboard development. Built and deployed production-grade analytics applications processing multi-decade, multi-country datasets using Python, Streamlit, Pandas, and NumPy. Complementary experience in time-series analysis, quantitative strategy backtesting, IoT sensor data collection, and supervised ML classification — enabling end-to-end ownership from raw data to actionable visual insight.

TECHNICAL SKILLS

Data Visualization: Streamlit, Matplotlib, Plotly, Interactive Dashboards, Chart Design, Geospatial Mapping

Data Analysis: Pandas, NumPy, EDA, Correlation Analysis, Time-Series Analysis, Statistical Evaluation, Feature Engineering

Languages: Python, JavaScript

Machine Learning: Scikit-learn, Logistic Regression, Decision Trees, Model Evaluation, Supervised Classification

Databases & Tools: Git, GitHub, Vercel, Jupyter Notebooks, Google Colab

Concepts: Business Intelligence, Data Storytelling, Quantitative Finance, Backtesting, Data Preprocessing, IoT Data

PROJECTS

Global Immigration Dashboard — Interactive Analytics Platform

May 2025

Python • Streamlit • Pandas • NumPy • Data Visualization • Deployed Web App

- Built and deployed a Streamlit analytics platform visualizing 60+ years of global immigration data (1960–2024) across 190+ countries with fully interactive filters and real-time chart updates.
- Engineered dynamic multi-dimensional views:** temporal trend lines, regional comparison charts, and country-level migration flow analysis — enabling non-technical users to derive insights without code.
- Performed comprehensive data preprocessing and EDA on a multi-decade, multi-source dataset: handled missing values, standardized country codes, and resolved structural inconsistencies across 60 years of records.
- Designed for data storytelling:** each visualization surfaces a specific analytical insight (e.g., post-2000 acceleration of migration from South Asia, decline in Eastern European emigration post-EU expansion).
- Recognized by peers with GitHub stars; deployed as a live public web application accessible to any user worldwide.

Crypto Trading Strategy Backtesting & Analytics Tool

May 2025

Python • Pandas • NumPy • Quantitative Finance • Time-Series Analysis

- Designed and implemented a quantitative analytics framework to evaluate cryptocurrency trading strategies on historical price data using lagged correlation and signal extraction techniques.
- Engineered time-series features including rolling averages, price momentum signals, and lag-based cross-correlations to identify statistically predictive patterns across multiple crypto assets.
- Simulated portfolio performance over multiple market conditions and evaluated strategy quality using Sharpe ratio, maximum drawdown, and win rate — standard metrics in quantitative finance.
- Built a backtesting framework that validates trading signals against a baseline, quantifying strategy alpha and demonstrating rigorous analytical thinking over raw data.

IoT Food Waste Analytics System — Embedded Data Pipeline

Jan 2026

Python • MicroPython • Pandas • Scikit-learn • Ultrasonic Sensors • IoT

- **Designed an end-to-end data pipeline:** real-time IoT sensor data collection (ultrasonic sensors) → temporal feature engineering → supervised ML classification → operational insight delivery.
- Engineered temporal features (day-of-week, meal category, time-of-day aggregations) to transform raw sensor readings into structured analytical datasets suitable for pattern detection.
- Trained and evaluated Logistic Regression and Decision Tree classifiers to identify high-waste periods; surfaced a key insight: weekend dinners show 25% lower waste than weekday averages.
- Delivered findings as actionable operational recommendations that directly informed kitchen resource planning — demonstrating full-cycle data analytics from collection to business impact.

Explainify — AI-Powered Web Application

March 2026

React.js • Node.js • Express.js • Google Gemini API • Tailwind CSS • Vercel

- Built and deployed a full-stack web application using React frontend and Node.js/Express backend, demonstrating ability to ship production-grade software end-to-end.
- Integrated Google Gemini API to generate audience-adaptive explanations, showing applied experience with modern AI APIs alongside core data and analytics skills.

EXPERIENCE

Embedded Systems & Data Analyst Intern | *Rishihood University* Dec 2025 – Jan 2026 • Sonipat, India

- Collected and processed real-time food waste data from MicroPython-based IoT sensors, building a structured dataset for downstream analytics and ML modeling.
- Applied feature engineering and EDA techniques to extract temporal patterns from raw sensor streams, enabling classification model training on operational institutional data.
- Delivered a quantified operational insight (25% waste reduction on weekends) that was adopted into kitchen planning decisions — demonstrating analytics-to-action ownership.

Operations Executive | *AIRIS Club, Rishihood University*

Aug 2025 – Present • Sonipat, India

- Directed logistics and cross-team coordination for AI workshops, hackathons, and speaker events within the university's AI student society.

EDUCATION

B.Tech – Computer Science & Artificial Intelligence | *Newton School of Technology, Rishihood University*

Aug 2024 – May 2028 • Sonipat, India

Relevant Coursework: Data Visualization & Analytics, Machine Learning, Generative AI, Data Structures & Algorithms

Class XII – Science (PCM) | *Rajkiya Pratibha Vikas Vidyalaya*

2023 – 2024 • Delhi, India

ACHIEVEMENTS & EXTRACURRICULARS

- NDA-153 Recommended — selected among top candidates for the National Defence Academy; recognized for leadership, physical excellence, and discipline.
- National Yoga Champion — First place at the Nationals Yoga Championship; demonstrates sustained discipline and peak performance under competitive pressure.
- National-Level Baseball Player — represented at national competitions, showcasing team coordination and strategic execution.
